

A Reproducible Scientific Manuscript

One source → HTML, PDF (LaTeX) and Word

Dr Abdul Mannan

2026-07-22

Abstract

This template shows a journal-style manuscript authored once in Quarto and rendered to HTML, PDF and DOCX. It demonstrates executable figures, numbered tables, cross-references and citations from a shared BibTeX file.

1 Introduction

Reproducible reporting keeps the analysis and the narrative in one place. Emicizumab prophylaxis, for example, was established by landmark trial evidence (Mahlangu et al. 2018). Methods conventions follow Example and Sample (2025).

2 Methods

We simulate a one-compartment pharmacokinetic model (Figure 1) and tabulate concentrations at fixed times (Table 1).

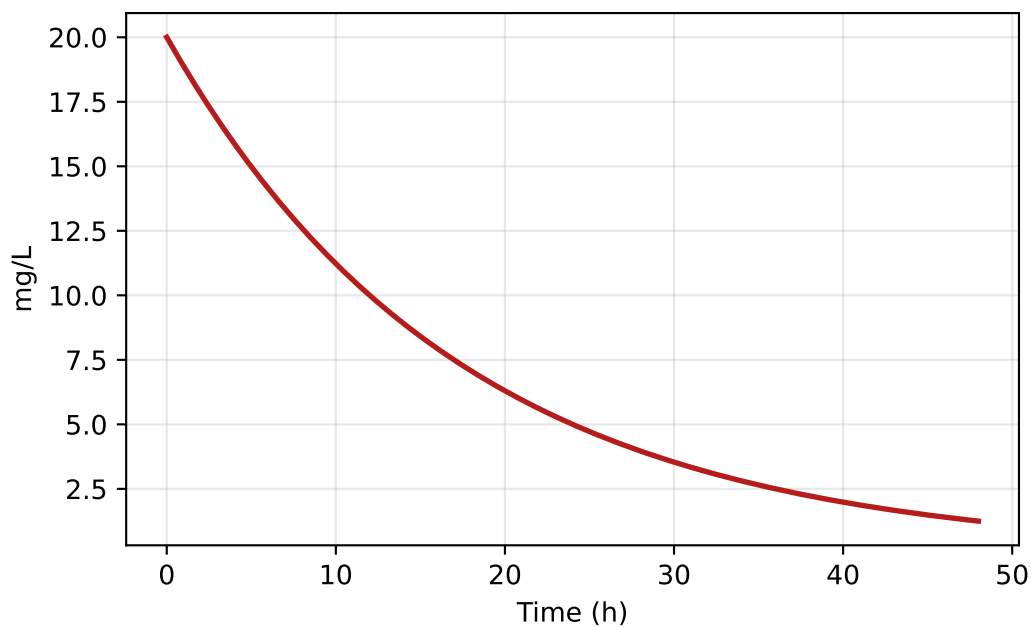

Figure 1: Simulated plasma concentration after a 1000 mg IV bolus.

3 Results

Table 1: Concentration at selected times.

	Time (h)	Conc (mg/L)
0	0	20.00
1	6	14.14
2	12	10.00
3	24	5.00
4	48	1.25

As shown in Figure 1 and Table 1, concentration halves every 12 hours.

4 Discussion

The same .qmd produced this HTML page, a typeset PDF and an editable Word file with no manual re-formatting.
